## Experiment No: 1

### Jenkins Installation :

The image displays two screenshots of the Jenkins installation process on a Windows machine.

**Top Screenshot: Getting Started**

The browser window shows the Jenkins Setup Wizard at localhost:8080. The 'Getting Started' screen displays a table of plugins to be installed:

Plugin	Plugin	Plugin	Plugin	Plugin
✓ Folders	✓ OWASP Markup Formatter	Build Timeout	Credentials Binding	Folders
Timestampers	Workspace Cleanup	Ant	Gradle	** Trilead API
Pipeline	GitHub Branch Source	Pipeline: GitHub Groovy Libraries	Pipeline: Stage View	OWASP Markup Formatter
Git	SSH Build Agents	Matrix Authorization Strategy	PAM Authentication	** Oracle Java SE Development Kit Installer
LDAP	Email Extension	Mailer		** Struts
				** Pipeline: Step API

At the bottom of the table, it says: \*\* - required dependency

Jenkins 2.278

**Bottom Screenshot: Create First Admin User**

The browser window shows the Jenkins Setup Wizard at localhost:8080. The 'Create First Admin User' screen displays the following form:

Username:

Password:

Confirm password:

Full name:

E-mail address:

At the bottom, there are two buttons: 'Skip and continue as admin' and 'Save and Continue'.
